## On Language Strategies in Meng Jiao's Industrious Versification

Fan Xinyang

**Abstract:** Meng Jiao's industrious versification focused on distinct expressiveness of poetic language. His original devices include: first, intensive and powerful diction which violates collocational preferences; second, sentence structures free from traditional limitation; third, unmetrical rhyme scheme. Instead of going too far in seeking originality and peculiarity, Meng Jiao strove for accuracy and vividness in language and learned from ancient poetry; as a result, his poems unite originality with the style of ancient poetry.

**Keywords:** Meng Jiao; industrious versification
