## **The Dilemma of Land-Lost Farmers' Employment and the Paths of Improving Their Employment Rate**

**Wu Jing**

**Abstract:** Many farmers have lost their land that they live on in the process of urbanization; therefore, the employment of land- lost farmers relates not only to the farmers' long- term life security but also to the harmony and stability of the whole country and society. This study introduces the living conditions and the current employment of land- lost farmers and analyzes the main factors that affect the employment rate, based on a survey of nearly 300 land- lost farmers in 79 households in the city of Tianchang in Anhui Province. This study suggests that the employment rate can be raised by strengthening skill training, establishing a multi- level employment service system, and improving the compensation mechanism of land expropriation.
